

## Floorcare and Maintenance

**5.5 MM WPC | Silver Lake Park Series**  
**6.5 MM WPC | Palmer Park Series**  
**8.5 MM WPC | Prospect Park Series**

### **How do you clean.**

Customer should use a damp cloth to blot up spills as soon as they happen to prevent stains. Customer should on a regular basis sweep, dust, or vacuum with the hard surface attachment regularly to prevent dirt and debris from accumulating. Failure to do this can scratch or dull the floor's finish. Customer can damp mop as needed with clean water and non abrasive floor cleaner. If needed, the customer can clean the floor with product specifically made for vinyl/wpc floors by lightly spraying the product onto a terry cloth or microfiber mop.

### **What you should avoid.**

Customer should not vacuum with a beater bar as it may scratch or impact the surface of your floor. When cleaning, never use soap, wax, or oil based detergents-they may dull the finish or leave a greasy film making the floors slippery and harder to clean. Do not mop the floor or otherwise use large amounts of water. Do not use abrasive cleaners, steel wool, or strong ammoniated or chlorinated cleaners. Do not use steam cleaners or buffing/polishing machines.

### **Things to keep in mind.**

Customer should consider rearranging spaces every few months to limit any block heat & fade-causing UV rays, artificial lighting, direct sunlight. Customer should also use mats at doorways to trap grit (e.g., sand, salt) and absorb moisture at entry points. Mats should also be placed in high traffic areas as way to reduce wear. Protective mats must be used for furniture or chairs with castors. Never slide furniture across the floor. Customers shall watch their pet's nails to ensure that they are trimmed to prevent them from scratching the floor. Maintain a normal indoor temperature throughout the year.
